
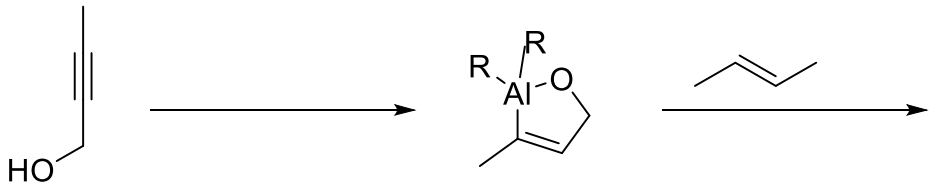
18-membered macrolide with four stereogenic centers;

Exhibits inhibitory growth of human cervical cancer and leukemia cells;

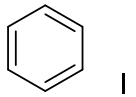
Cytotoxic against various human tumor cell lines in submicromolar concentrations;

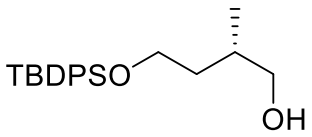
Biselyngbyolide B possesses 30- to 100- fold apoptosis-induction compared to congener, Biselyngbyaside

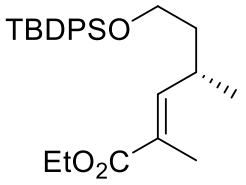
“Jamison’s Protocol”:



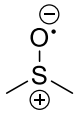
DMP Oxidation:



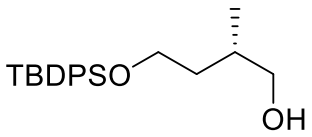


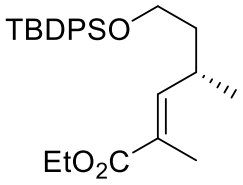


Swern Oxidation:



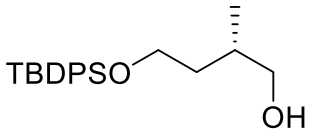
Witting Olefination:

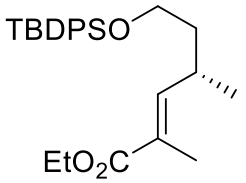




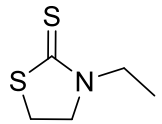
DIBAL-H Reduction:

Crimmins

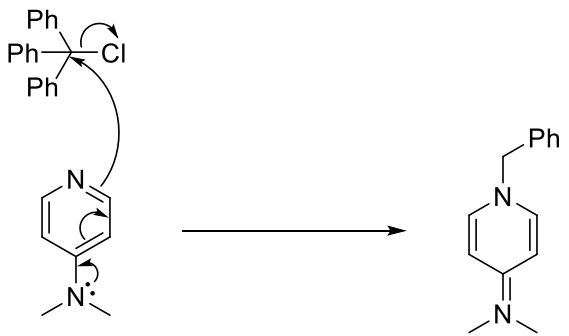


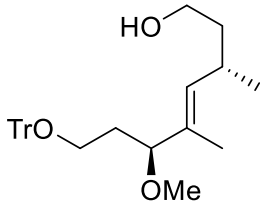


Sodium Borohydride Reduction:



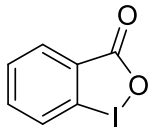
Hydroxyl Protection:



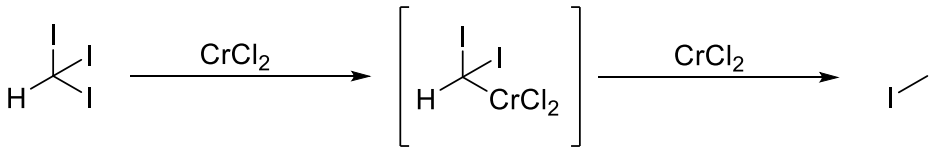


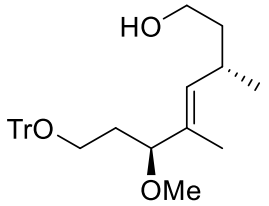
21

IBX Oxidation:



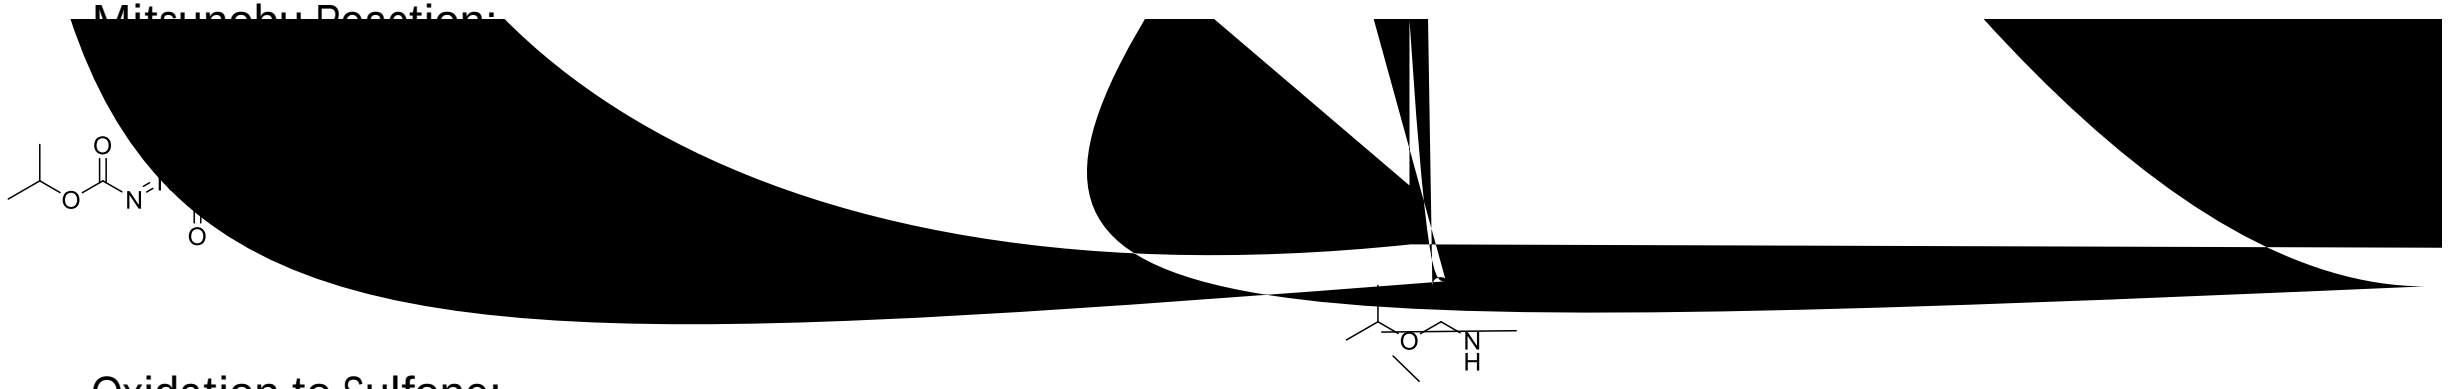
Takai Olefination:





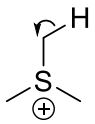
21

Mitsunobu Reaction:



Oxidation to Sulfone:

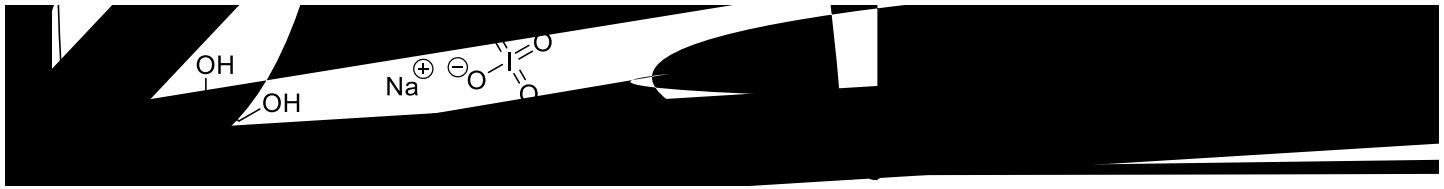
Epoxide Opening:

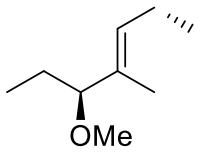


Silyl Protection:

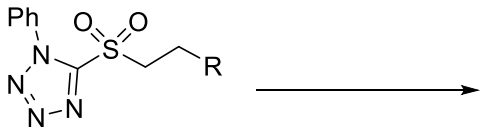
Dihydroxylation:

Sodium Periodate Diol Cleavage:

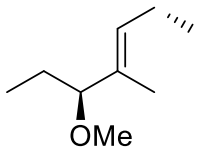




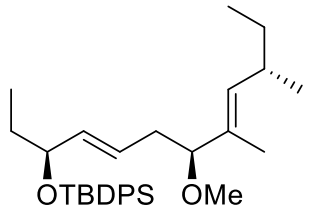
Julia-Kocienski Olefination:



Desilylation with CSA:



Pinnick Oxidation:



Heck Reaction:

Pd(0)

R

1	$Pd(PPh_3)_4$, NEt_3, MeCN	60	3	decomposition
2	$PdCl_2(MeCN)_2$, NEt_3, CO_2H_2, MeCN	25	3	decomposition
3				

PdCl
